

ENVIRO CLEAN

Electric Mist

We use ULV foggers and medical grade chemicals to fight bacteria and viruses including **COVID-19**.

This mystified disinfectant is **safe to breathe** and be around while it is being distributed.

There is a suggested re-entry time of twenty minutes. That time allows the chemical to bond to any germs and kill them.

This method of disinfecting is more efficient for the members to disinfect large square footage areas.

The chemical that we use is known to be **99.999%** effective in killing different viruses.

- Kill mold and germs in every nook, crack, and crevice.
- Spray and wipe technique misses areas and cross-contaminates.
- Saves time and money by reducing excess labor costs.
- Effective for public transportation, schools, municipal buildings, bio-terror.

The system is perfect for applications such as Hospitals, Extended Living, EMS, Transportation Schools, Commercial Spaces, Athletic or Sports Facilities, Jails, Detention Centers & Police, Aircraft, Fire & Rescue Departments, Municipal Buildings and many more!

Serving all of North America!
